

iEvac®

SMOKE/FIRE HOOD

E900

Please Read Before Donning

1. The iEvac® contains an anti-fog coating. To prevent any fogging, when donning the hood, the individual should hold their breath for the few seconds until the nose cup is secured over their nose and mouth and fits under their chin. To accomplish this they need to **quickly pull the straps tight once the nose cup is in position.**

2. While being worn it is normal for the iEvac® hood itself to move very slightly in phase with the breathing of the wearer. This small harmonic movement shows that the neck seal is performing correctly and preventing smoke and other materials from by-passing the filters and entering the hood. Most people will not detect it, but the in-and-out motion may be pronounced when the hood is worn by larger individuals or when the wearer is breathing very deeply. **The protection provided by the iEvac® is not affected by this movement.**

iEvac® Donning Instructions

This hood pulls over your head like a ski mask. Look at the pictures to see how it is worn. Your head goes inside the hood opening at the bottom of the hood, with the cup at the front. The neck dam will then seal around your neck. You pull the straps at the lower back of the hood tight so that the cup snugly covers your nose and mouth.

For the needed protection, the iEvac® is vacuum sealed in a very sturdy and secure foil bag. The opening of the foil bag will require some force, please read directions below carefully.

1. Take the vacuum-packed foil bag out of the box.
2. With Force, Quickly and Firmly tear open the foil bag as far as possible, at the slit marked with a "tear to open" sticker.

3. Quickly take the hood out of the packaging and don't be afraid to unfold and pull open the hood from the tight vacuum packaging in a forceful manner. Once the hood is unfolded and opened, you will find the neck dam at the bottom of the hood.

4. With the nose cup and filters facing down towards your body (see picture), stretch the hood opening out by placing your fingers in the neck dam with your thumbs spread wide and the back of your hands facing each other.

5. Place the neck dam under your chin and quickly pull the hood over your head & pull the neck dam down to the bottom of your neck.

6. Make sure the cup is covering your nose and mouth and fits under your chin.

7. Using both hands, quickly grab the ends of the straps at the lower back of the hood (see picture) and pull them tight ensuring that the cup fits snugly.

8. Make sure the neck dam directly touches your neck all around.

Removing the iEvac®

1. First lift the tab (protruding end) of one connecting buckle with one hand and with your other hand pull the elastic strap towards the front.
2. Repeat with the second buckle and strap.
3. Pull the iEvac® over your head.
